

Jianmian Zhang, ARCHITECT

<https://jam-arch.netlify.app/> | Jianmian.zhang@mail.polimi.it

HIGHLIGHTS OF QUALIFICATIONS

- Seeking for **2026 Full-time** opportunities
- Master of Building Architecture professional with *8+ years* ' experience in Architecture Design, including Architecture design and Interior Space design

EDUCATION

Politecnico di Milano

Master of Building Architecture

Milan, IT

09/2023-Expected 07/2026

Shenzhen University

Bachelor of Architecture

Shenzhen, CN

09/2018-07/2023

INTERNSHIP

Cebra: Architect Intern, Full time

Aarhus, DK, 08/2026-12/2026

• LEGO Innovation Campus:

Contributed to the Design Development phase with a focus on the detailed resolution of interior spaces. Developed and refined custom furniture, floor finishes, curtains, textures, and material palettes, comparing physical samples and finish options with project architects and partners to support final design decisions and translate the design concept into buildable interior solutions.

• Library Renovation Project:

Developed the transformation strategy for the existing library by designing custom bookshelf elements as an interior landscape and exploring skylight solutions to shape light and spatial experience. Tested alternative configurations in Rhino and supported drawings, models, and presentation materials for design review.

Cebra: Architect Intern, Full time

Aarhus, DK, 02/2025-07/2025

•Primary School Competition:

Joining the team after the core concept was completed. Contributed to the development of plans, sections, and elevations based on the initial concept, refined material choices and structural logic, and designed the site landscape layout.

•Villas:

Refined the design of two villas by adjusting sections based on existing floor plans and developing detailed elevations. Studied the construction logic and materiality of louver systems.

•Library Renovation Project:

Applied a lightweight spatial intervention strategy by redefining the interior of an existing library through custom bookshelf partitions, achieving flexibility without altering structural elements.

•Renovation of an Existing Factory:

Participated in the adaptive reuse of a prefabricated factory building with well-preserved façade and structural elements. Responsible for cataloging, modeling, and reusing all available materials in the design of a new residential project. Contributed to both conceptual research and detailed design phases.

ACADEMIC EXPERIENCE

Workshop: Super High-rise Building Structure

Shenzhen, CN, 09/2021-10/2021

Professor: Zhong Zhong, Li Yong, Deng Wenhua

High rise core design, basic structural calculation and force analysis on high rise building

SKILLS & AWARDS

LEED Green Associate — Exam planned for December 2026

Competition Finalists(Top30):

Terraviva Competition_Florence Hills(Collaboration)_Reuse the villa

MI, IT, 09/2025

Terraviva Competition_The Field Station(Individual)_Design the research center

MI, IT, 10/2025

Terraviva Competition_Unesco Ancient Theatre (Individual)_Reusing the ancient theatre

MI, IT, 10/2025

Terraviva Competition_Rising From Ashes(Individual)_Design the church

MI, IT, 12/2025

Terraviva Competition_Candelo Urban Link (Individual)_Reuse the city plaza

MI, IT, 03/2026

Terraviva Competition_Karlovo Living Landscape (Individual)_Landscape Housing

MI, IT, 04/2026

Young Architects Competitions_Abandoned Airport (Collaboration)_Design the observation points

MI, IT, 01/2026

Competition Mentions(Top7):

Young Architects Competitions_Oceanic Parliament(Collaboration)_Design the floating building

MI, IT, 03/2026

Software:

Model- Rhino (Expert) ; Sketch Up(Expert) Enscape (Expert) ; Adobe Suite- Photoshop (Expert); InDesign (Expert); Revit(BIM, Expert)

Grasshopper (Intermediate); Drawing- Autocad (Advanced); Illustrator (Advanced); Premiere (Intermediate);

Render-V-ray (Advanced); Lumion (Intermediate); D5 (Intermediate)

Other Skills:

Watercolor, Marker, Gouache painting, Digital Photography, Film Photography, Model Making, Drive Drone

Research Experience

Simulation-Based Facade Performance Studies 2025 - Present

Politecnico di Milano, Milan, Italy

- Developed a simulation-based research workflow to study single-facade performance under controlled boundary conditions, beginning from a thesis context in Naples.
- Completed studies on annual cooling-load prediction, cooling-daylight relationships, and comparative cooling-load analysis across Naples, Los Angeles, and Boston.
- Investigated the effects of shading depth, window-to-wall ratio (WWR), SHGC, and orientation through parametric simulation and data-driven analysis.
- Built surrogate-modeling workflows in Python and applied interpretable machine learning methods to support early-stage facade design decisions.
- Developed a prototype design-support interface to translate simulation results into a more accessible facade evaluation workflow.

Research in Progress Ongoing

Independent / thesis-linked development

- Extending the current facade-performance line of work toward multi-performance evaluation and broader urban-regeneration questions.
- Interested in connecting environmental performance, adaptive reuse, and decision support across multiple scales.
